Building on experience

**XSPlatforms®**  
Suspended Platform Systems

# Supporting suspended platforms

Suspended platform systems are a relatively quick and easy way of providing façade access. Their safety depends on the hoist equipment supporting them. In the XSPlatforms range of hoist technology, proven reliability is combined with innovative solutions for easy transport, storage, handling and ease of use.

## **Bridging the innovation**

In our view, the starting point for innovation is being thoroughly familiar with the everyday needs and challenges of both the people who invest in our equipment and the people who use it. In the case of hoists, this means meeting the needs of the people who use the hoists and the rental companies that provide them.

The result: a range of hoists for every situation, including high-end solutions for minimal maintenance and maximum user-friendliness.

# Hoists

---

## Proven hoist reliability

The technology on which our hoists are based has demonstrated its reliability for decades. Our hoists are compact, robust and require little maintenance. They consist of relatively few components, so when periodic maintenance is needed, disassembling the hoist and putting it back together takes a minimal amount of time.

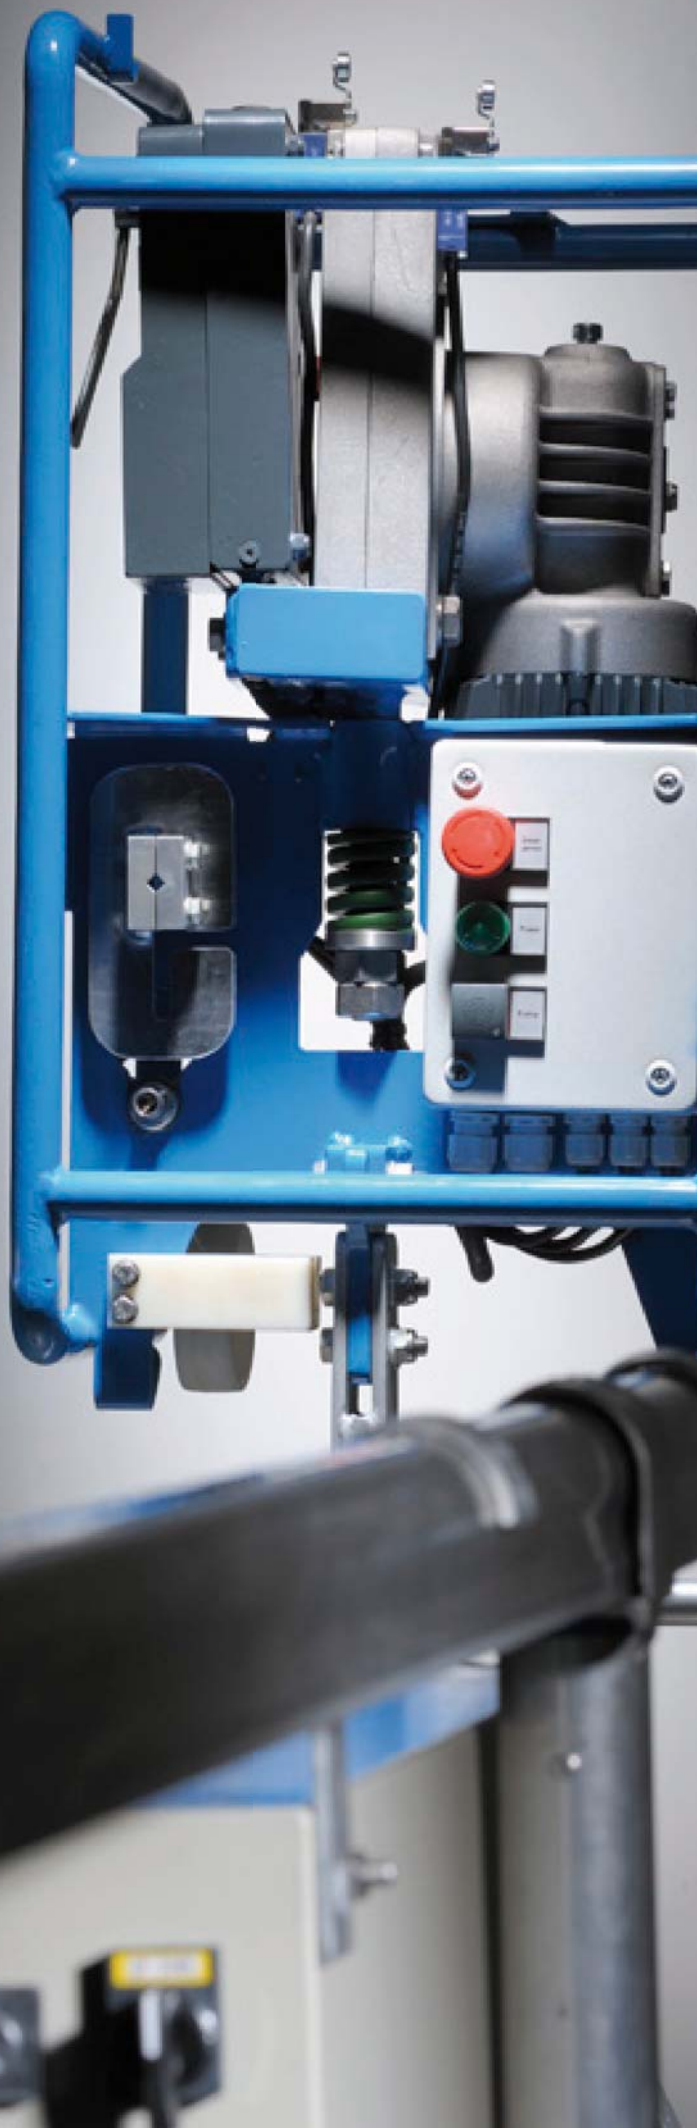

## User-friendliness

Hoist technology should be accessible, in the widest sense of the word. That means: easy to install and operate, easy to carry and transport. Unlike other products in the market, our steel cables can be fitted easily, without the risk of jamming. The very design of the hoist unit, with all the technology hidden in a lockable box, seems to say 'this technology is easy to use'.

## Efficient logistics

XSPlatforms prides itself on understanding the needs not only of the people who use our technology, but also of the rental companies that invest in it. Our hoists take up little space, are easy to move around and require minimal maintenance.

The rental hoist is easy to transport. It can be lifted or driven around by simply placing a scaffolding pole through the frame. Storage is also efficient: the rental hoist is stackable, with a frame size of 40 cm x 40 cm (15.75 x 15.75 in).

The rental hoist integrates hoist and fall protection in a single, robust steel frame. This makes assembly easy, fast and straightforward.

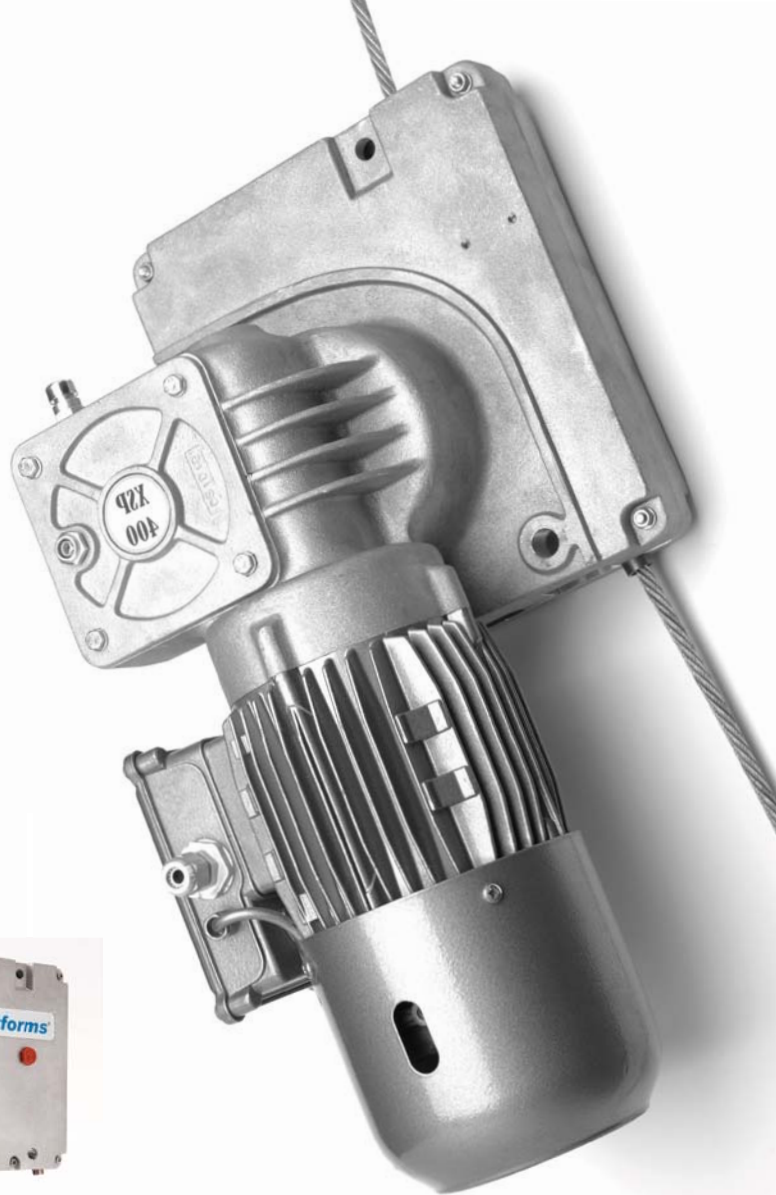

The XSPlatforms hoist technology has earned a solid reputation for its quiet operation, durability, flat design, low maintenance costs and relatively low self-weight. This technology was once used only in self-hoisting gondolas, but is now also available as a separate hoist that is compatible with all makes of suspended platforms.

MODULES OF THE PLATFORMS	2 METER	1 METER
System length	2.0 m	1.0 m
Length of section	1.94 m	0.94 m
Outside width (a)	780 mm	780 mm
Inside width	684 mm	684 mm
Module weight	46,2 kg	22,4 kg
(Connection frame weight)	12,2 kg	12,2 kg
Inside height of guardrail	1007 mm	1007 mm

The hoist unit serves as a suspension frame that can be used both as end-stirrup and as walk-through stirrup. Mounting the unit is easy, reducing the risk of errors to an absolute minimum.

The suspension beam of the hoist unit is adjustable for different heights, which saves storage space and offers maximum working space in use. The unit is fitted with large wheels and a handle for easy moving in the warehouse and on site.

The hoist suspension unit combines hoist and fall protection in a lockable box. This protects the electrical components against bad weather, thus ensuring a longer life and less maintenance. Its flat design and silent motor emphasize its high-end credentials.

#### **SAFETY FEATURES INTEGRATED IN THE RENTAL HOIST AND HOIST UNIT INCLUDE:**

- Over-speed safety device
- Broken and slack cable safety device
- High applied load safety device
- Top-limit and over top-limit switch
- Mechanical override and hand-wheel facilities (to be used in case of a power failure)
- Anti-tilt device
- Emergency stop button
- Overload signals

# The power of a total concept

XSPlatforms: one brand delivers it all. XSPlatforms is the partner of choice for customers who are seeking first-class total solutions that provide maximum convenience. From initial advice to on-the-job training, we can supply everything you need – from standard products to solutions for the most complex projects. The possibilities are endless. Customers enjoy the convenience of having just one partner, and the confidence of knowing that that partner understands and cares for their business, responding to all their concerns and coming up with the best possible solution, time and again. We care for our customers, in every sense. That's why we develop and engineer our products as though our lives depended on them.
